With proper utilization of data analytics, automation, and techniques that empowers utility companies.

Transforming The Way Utilities Work

Holding on to advanced data analytics and predictive outage management analytics, the company empowers a renowned western south Carolina electric cooperative.

Utility companies across the world have started recognizing the power of data analytics and artificial intelligence. However, some companies are yet to see excellent growth opportunities in the data analytics industry.

In this chain of progress, our company implemented advanced predictive outage management analytics for one of the major western South Carolina Electric Coop, possessing thousands of members and a very large system grid area.

No Utilities Can Sustain Without Digitization and Analytics

In this chain of progress, our company implemented advanced predictive outage management analytics for one of the major western South Carolina Electric Coop, possessing thousands of members and a very large system grid area.

"Despite being a well-developed enterprise, serving thousands of customers, our client encountered nerve-racking challenges due to improper utilization of operational systems and data analytics. Once the initial analysis was done, AriesPro implemented the finest strategies in order to amalgamate the ongoing business operations." said the Vice President of Utility Solutions at AriesPro.

Based on the several assessment and facts breakdown, we opted to strengthen the engineering and operational side for the enterprise, South Carolina electric cooperative. The process followed the integration of the outage management strategy.

"Technology Continues to Evolve"

The ultimate solution that emerged from AriesPro is the refinement of 'Engineering and operations', then eventually, integrating both for a profound system for outage handling and prediction. Moreover, the company is continuously rolling down better technologies to gain wider coverage among the utilities in the USA.
